

COMPACT SEMINAR, SS 2016

[Renato d'Alençon Castrillón](#)

Disaster City

In addressing disaster-prone areas, several questions arise regarding risk prevention, emergency resilience and reconstruction management:

What policies need to be adopted or formulated to strengthen cities and territories threatened by natural disasters? How are these policies implemented in practice? How to involve the public authorities, the population and the technicians in order to improve the resilience of both communities and the built environment? Is it necessary to develop ad-hoc or prescriptive tools? How are these relevant towards a wider regional intervention?

In this project, we develop an international platform to understand the state of the art and potential innovation in the paradigms that govern urban design and architecture in disaster-prone areas.

In addressing disaster-prone areas, several questions arise regarding risk prevention, emergency resilience and reconstruction management:

What policies need to be adopted or formulated to strengthen cities and territories threatened by natural disasters? How are these policies implemented in practice? How to involve the public authorities, the population

and the technicians in order to improve the resilience of both communities and the built environment? Is it necessary to develop ad-hoc or prescriptive tools? How are these relevant towards a wider regional intervention?

In this project, we develop an international platform to understand the state of the art and potential innovation in the

paradigms that govern urban design and architecture in disaster-prone areas.

Based on a partnership of TU-Berlin and Politecnico di Milano we will respond to the challenges of Issue Paper 17: Cities and Climate Change and Disaster Risk Management in a series of 3 workshops towards Habitat III in Quito.
